Java practical

```
Qs 1 import java.io.*;
public class test
{
    public static void main (String[] args) throws IOException
    {
        PrintWriter out = new
        PrintWriter("two.txt");
        PrintWriter pw = new PrintWriter (new FileWriter("one.
        txt"));

        for (int i = 100; i < 550; i++)
        {
            pw.println(i);
            pw.flush();
        }
        System.out.println ("The number is inputed.");
        BufferedReader br = new BufferedReader (new File
        Reader ("one.txt"));
        String line = br.readLine();
        Out.println ("reverse");
    }
}
```

```
while (line != null)
```

```
{
```

```
    String rev = new
```

```
    StringBuilder (line).reverse().toString();
```

```
    Out.println (rev);
```

```
    Out.flush ();
```

```
    line = br.readLine ();
```

```
}
```

```
System.out.println ("Reverse is done");
```

```
pw.close ();
```

```
out.close ();
```

```
{
```

```
}
